DQ Checked Rows

1,185954 Mio.

dimension	table_name	check_name	failed_rows	total_rows	DQ Failure Rate %
Integrity	order_items	Item with unknown seller	0	112650	0,0%
Validity	order_items	Price missing or <= 0	0	112650	0,0%
Validity	orders	Purchase timestamp not convertible	0	99441	0,0%
Consistency	orders	Not delivered, but delivery date set	6	99441	0,0%
Completeness	orders	Delivered order without delivery date	8	99441	0,0%
Completeness	products	Category missing in translation file	13	32951	0,0%
Consistency	orders	Delivered to customer before carrier pickup	23	99441	0,0%
Consistency	orders	Handed to carrier before purchase	166	99441	0,2%
Completeness	products	Product without category	610	32951	1,9%
Completeness	orders	Order without review	768	99441	0,8%
Completeness	orders	Order without any item	775	99441	0,8%
Uniqueness	order_reviews	Duplicate review_id rows	814	99224	0,8%
Consistency	orders	Handed to carrier before approval	1359	99441	1,4%
Gesamt			4542	1185954	0,4%

How we handle it:

- Handed to carrier before approval (1,359): excluded from seller processing time, kept in all counts.
- Orders without items (775): kept in the customer view (fact_orders), not in the supplier view.
- Duplicate review_id (814): reviews aggregated per order, the worst score is used.
- Missing or untranslated category (623): shown as "unknown"; 13 categories translated manually.
- Delivered without delivery date (8): excluded from OTD and lead time.

Raw data stays untouched (stg). All rules live in SQL views (core / mart) – see docs/KPI-Definitionen.md.
